SWISP GPT PRODUCT MANUAL

INTRODUCTION

As technology advances, encouraging creative thinking is more important than ever. The SWISP Lab has developed paper "chatterboxes" to help people explore "what if" questions, sparking creativity. However, these tools face challenges in scaling and deep interaction. Many existing digital tools cannot also engage users meaningfully. The AI Chatterbox project, led by SWISP Lab, aims to solve this by using an AI-driven platform to bring the benefits of traditional tools into the digital age, making creative exercises more accessible and interactive for everyone.

OUR PROJECT

The AI Chatterbox project seeks to bring the traditional paper-based chatterbox into the digital age by developing a web-based AI chatbot. Historically, the chatterbox has been used to prompt speculative thinking by asking "what if" questions, stimulating creativity and interdisciplinary dialogue. This project aims to replicate and enhance this experience through an AI-driven platform that generates speculative questions based on user input. Designed primarily for use in art galleries, this chatbot will engage users, particularly those aged 14-28, in thoughtful exploration of complex social and environmental issues.

4. What if remote work policies were tailored to accommodate different time zones, creating a truly global workforce?

5. What if the shift to remote work significantly changed the way cities are designed and function?

6. What if companies started providing stipends for home office setups, impacting the economy in unexpected ways?

7. What if remote work led to a rise in work-life balance, resulting in higher overall job satisfaction?

8. What if the increased flexibility of remote work encouraged people to live in rural areas, changing demographic trends?

Which of these questions do you find most intriguing?

Based on remote work, the selected 'What If' question is:
5. What if the shift to remote work significantly changed the way cities are designed and function?

RANDOM: What if humans could communicate with animals, leading to a new understanding of their thoughts and emotions?

A watercolor illustration of a hand holding a pen, with various colorful shapes and patterns scattered around. The background is a light, textured grey. The hand is drawn in a simple, sketchy style, with the pen tip pointing towards the center. Surrounding the hand are several abstract shapes in shades of orange, red, blue, and yellow, including circles, ovals, and a star-like shape. There are also some small, scattered dots and lines in the background.

THANK YOU

We hope our product sparks your creativity and speculative thinking
